(54) Title: APPARATUS

(57) **Abstract:** The present invention relates to an apparatus for securing inhalation of substantially smokeless air from a smoky room, which apparatus comprises a protection (2) that is arranged over at least nose and mouth at face (4) of a user, to which protection a tightly arranged tubular body (6) is connected, a nozzle is arranged at the end (8) of the tubular body at the inside of the protection adapted to placed against the mouth of the user, which communicates with an air inlet opening (10) in the other end of the tubular body and the tubular body forms a length (1) in elongated condition that at least extends to adjacent ground level, that the tubular body (6), that is formed of flexible material, is compactable and/or expandable and together with the protection (2) in a folded condition forms a package that has its substantial propagation in one plane (P) and requires little space.
